De la programmation par objets aux Structures de Données et Algorithmique

From OOP to Data Structures and Algorithmics

Mireille Blay-Fornarino

Introduction

Software Development Life Cycle (SDLC)

Tests

You will study the tests in PS5; you will have to use them systematically in all our developments. We will complete them by checking the complexity of the codes and their "quality."

Design

You will gain design skills by working on the organization of your software, learning how to assess a specification.

Build

You will learn to design and write code by mastering specific tools and techniques. It's the essential part of the acquisition targeted by this teaching.

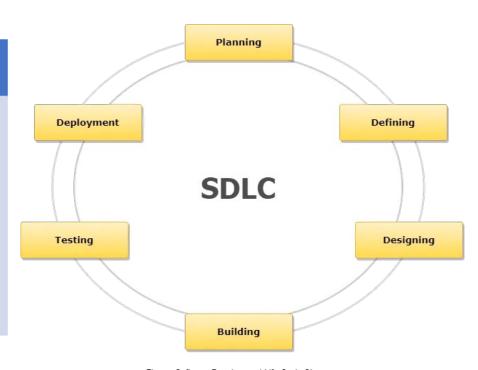

Figure: Software Development Life Cycle Stages

https://www.w3schools.in/sdlc/software-development-life-cycle-sdlc

Software design « Software design (the process) is the construction of abstractions of data and computation and the **organization of these abstractions** into a working software application. In practice, the design process is essentially one of decision making. Should we use a list or a stack? What services should this interface offer? Where should this error be handled? »

Robillard, M. P. (2019) Introduction to Software Design with Java. Cham: Springer International Publishing. doi: 10.1007/978-3-030-24094-3

Goals

Be able to make good design choices as a developer (project manager, etc).

 Reason in terms of the general abstractions that come up in all non-trivial software (and many nonsoftware) systems

Be able to justify and communicate your design decisions

 Key abstractions used almost every day in just about anything related to computing and software

Assumed Background

Fundamentals of computer science and object oriented programming –
Variables, conditionals, loops, methods, fundamentals of defining classes, arrays, ...

Organisation du module

Eco-système

Semestre 1:

- De la POO aux Structures de Données et Algorithmique : Basics of software design
- PS5 Project: Basics of Software Development Management

Semestre 2:

- Algorithmiques et Structures de données : POO en action (S6)
- PS6 Project: Producing software for humans: from specifications to tests and vice versa, impacts on software architecture.

Environnement de travail

Java 17

IntelliJ et ses plugins

sonarLint

A installer avant le TD

https://www.jetbrains.com/community/education/#students

Organisation (non figée)

1h de cours par semaine

2h30 de TDs

• Avec des quiz en amphi de temps en temps sur la base de quizz donnés pour vous entrainer en TD.

Un travail personnel est attendu pour terminer les TDs en plus de comprendre le cours évidemment.

Evaluations

Quizz, Tests et Rendus réguliers (60%) Contrôle(s) de synthèse (40%)

Matériel de cours

- Tous les documents de cours et de TDs seront accessibles à partir de moodle* (parfois pour des renvois vers des documents/codes extérieurs)
- Il s'agit d'aides visuelles, mais pas d'une description complète
- Livres:
 - Robillard, M. P. (2019) Introduction to Software Design with Java.
 - Avancé
 - Cormen, Leiserson, Rivest, Stein
 - Bonne lecture, mais assez détaillée et complète

Les références utilisées dans le cours vous sont données au fur et à mesure.

^{*} Nommage des modules non mis à jour... problème administratif.

C'est parti!
